# **Motorization Made Easy!**

### Who is Alpha Motors

Alpha Tubular Motors produce a very high quality range of motorization products and accessories for indoor roller blinds, outdoor awnings, shutters and screens.

Alpha offers reliable, intuitive motorization solutions with a highly competitive edge. Our focus is on genuine high-guality motorization products at a realistic price. All Alpha AC motors carry our 7 year replacement warranty and have been engineered to last 25 years. We also boast some of the most elegant and flexible controllers on the market and our programming is super simple.

Although new to the North American and Canadian markets, Alpha has a strong record of success in Australia where the company was founded. We are currently the second bestselling motor in Australia amongst the usual array of European offerings and we are the best selling motor by far in external products. In some categories like External Straight Drop Screens, we outsell all other brands combined. The reason for this is simple. The combination of high quality and versatility that could only be found in European motors previously at a price retailers were afraid to quote customers, suddenly became available at a price that retailers were willing to actively promote.

In truth, it wasn't easy for us in the early days. Companies that had only used European products were wary in the beginning. So when they did try us, it was usually on the basis of being a second offering in case a customer didn't want to pay the price of a European motor. Typically, after a very short period of time, usually around two months, we would become the preferred or standard offering, and the European motor would be relegated to a "supply on request" offering. Not only did we become the preferred brand, but they started actively promoting motorization in their businesses, and manufacturers that previously sold 10–15 motors a month, were selling 80–100 a month within a year.

At Alpha we place great importance on doing things the right way. We make a point of being ethical in the way we do business and deal with every situation in a manner designed to keep everybody happy. Likewise we always ensure our products are fully compliant to North American standards, including UL and FCC requirements.

Our happy customers within the Australian window coverings and shading systems industry love our products and service, which has given us the huge success we enjoy there. As we expand into the North American market we hope to partner with you on future projects, and that we may help you grow your business and profitability.

### WSER50 universal

' year replacement warranty Electronic limit switch Built-in receiver Wireless limit setting External antenna

Due to the torque stop function, this motor is ideal for all external drop screen systems. This protective feature can be used to stop on stoppers at the top limit in side channel systems and can also be used to tension the fabric when the shade is down. A top limit is set normally and the torque stop function can be used in conjunction.

The **WSER50S** 10Nm/21rpm is a short motor version for smaller applications.

It measures in a length of 20.375"

The Alpha 6 wire model is both a remote control and dry contact control motor. This allows for both full RF connectivity, as well as the ability to operate via hardwire control, thus allowing for integration into various control systems or a simple doorbell button.

**OPTIONAL MODEL** 

Product Certificates

# WSER50

retractable awning motor

' year replacement warranty Electronic limit switch Built-in receiver Wireless limit setting External antenna

The WSER50 retractable awning motors are designed to automatically set their inner limit based on tension. It will also allow you to set the inner limit manually if you require.

6

When using the auto inner limit setting, the outer limit is set manually using the remote and it will find its own inner stopping position by detecting the resistance as it reaches the fully closed position the first time it is closed. After this the motor will stop in this position after detecting an increased resistance of 25% while moving.

On larger cassette awnings, 25% is sometimes not enough so you can increase this to 50%, 75% or 100% if required. It's rare to need this adjustment but it's a good feature to have.

When used with Sun/Wind sensors or Motion sensors, this motor detects a pulse from the sensor issued every 20 minutes. If the Awning is out and does not receive a signal from the sensor for half an hour, it will close itself automatically as a protective measure assuming the sensor has failed or the batteries are flat.

Electronic Limit Switch Built-in Receiver Motor 45mm diameter

Models are also available in 6 wire for both radio and dry contact control.

#### obstacle detection motor with star head

' year replacement warranty Electronic limit switch Built-in receiver Wireless limit setting External antenna

Designed primarily with Zip style systems in mind, this motor incorporates obstacle detection in both directions. It can stop on stoppers at the top limit if necessary on the way up, but also, if on the way down, the motor detects that the bottom bar has stopped moving in the channel due to getting stuck or hitting an object, it will rebound to a higher point and attempt to go down again. After attempting this 3 times unsuccessfully, if it has detected an obstacle, it will return to the rebound position and stop. But if it has detected wind stopping the awning, then it will return to the top limit.

This motor has a star shaped head which is different to all other Alpha motor heads, and will suit many common mountings used by various manufacturers when producing their product.

For compatible mounting brackets, please see the A3438 and A3440

on page 44

# WSER60 100/15

universal motor

' year replacement warranty Electronic limit switch Built-in receiver Wireless limit setting External antenna

The WSER60 is the heavy duty motor within the WSER family.

Although it's a universal motor, it's compatible with extra-large retractable awnings, including the additional safety features provided by motion and wind sensors.

Due to the larger diameter of this motor, the smallest tube it can be used with is a 78mm single keyway tube, or a 70mm octagonal roller shutter tube.

#### rechargeable internal battery motor

This new version of our popular battery motor has a new ground-breaking coreless DC drive inside, that is much more efficient and much quieter than other battery motors.

The WSERD30B 2/31 motor has internal lithium rechargeable batteries with approximately 12 months of an average use of 750 up/down cycles between charges on an 8ft x 8ft blind. It can be used on blinds up to 10ft x 10ft.

The 3Nm version of this amazing motor will lift a blind 10ft high x 15ft wide and the time between charges will average 8 - 12 months under normal usage.

The fittings for these motors will allow it to be used with a range of tube sizes from 30-50mm in diameter. All of the charging intelligence is taken care of inside the motor, not by a 3rd party charger. This eliminates many of the issues experienced by other brands of DC motors. The motor will indicate both when charging is required, and completed. It cannot be overcharged and it will not start to discharge when the batteries are full as other brands may do. The charger plugs directly into the motor head so there is no need for an unsightly charging cable.

### **ALDC charger required**

- \* Charger comes with 13ft cable.
- \* 10ft extension cable also available.
  - \* Motor comes with 20cm charging tail for optional use, in case the motor head is difficult to access after installation.

New super efficient coreless motor design

- Longest time between charges of any equivalent product
- Soft stop function
- Super quiet operation
- No unsightly charging cable

# **Remote** Controls

Introducing the new range of Pioneer series remote controls, with a new sleeker look and wall holder design. The other big change is the addition of a battery cover, so there is no more need to un-screw the back to change the battery. Available in single or 4 channel versions without a screen, or 4, 8 or 16 channel versions with a screen, as well as single and 4 channel options with timers. Incorporating soft silicone rubber edges and buttons, this is a great remote for use with external products where being a bit more bounce proof is an advantage. All Alpha remotes and receivers are inter-compatible.

QUALITY

# **Remote Controls**

The Navigator series has an elegant and simple design featuring stainless steel edge trim and a near invisible magnetic wall mount. The stainless finish is much more than simply a trim on the edge. It's actually a solid steel chassis to which the front and back panels are attached. This gives the remote a great deal of structural strength, but additionally adds a significant feel of weight and quality in the hand that customers often notice. Available in single and 5 channel without screens, and 4, 8 and 16 channel with screens as well as single and 4 channel options with timers.

The new Alpha Keypad remote is a great way to provide additional security to a point of entry blind of shutter. When use of a blind, awning or shutter needs to be restricted, this is a great solution.

Simply setup the keypad remote with your own personal code between 5 – 16 digits. Then when you want to control the product, simply enter the code, then issue the desired command. The Keypad will then time out back to locked mode after 30 seconds. This item is of course compatible with all our remote control motors and receivers.

### Relay controlled remote

# **RE-DCE**

This device is a single channel remote control that plugs into a power point for permanent power and is controlled by connecting the device to relays in a control system or other switches. There are 4 wires connected this item: common, up, stop, and down. When the common wire comes into contact with any of the control wires, the function for that wire will be sent out to any WSER series motors or remote receivers this device is assigned to.

This device allows remote control Alpha motors to be operated by a huge variety of building management systems, automation equipment, press buttons or key turn switches as well as a remote control. This device is not practical for use in setting up the motors it will control. This must be done with a standard remote and the RE-DCE can be assigned to the motor separately for additional control options.

When planning your job with this item, only allow for connection to relays or switches that make contact as long as a button or switch is pressed and release automatically afterwards. Do not use rotary switches or switches that lock into position as the item will continue to send out the signal for as long as contact is made. This could produce unwanted results.

Channels	1
Frequency (MHz)	433.92
Codes	Rolling
Wall Mount	Yes
Voltage	120V 60Hz

# **RS005 Motion Sensor**

### for folding arm awnings

Available in black or white

This item attaches to the front channel of a retractable awning at either end. It measures the angle of the front bar and the amount of movement created by wind. When the sensitivity setting is reached, it sends a signal to the awning to close.

When used with a retractable awning motor, it will send a pulse to the motor a few times an hour telling the motor it's there and working. If the motor stops detecting this pulse due to drained batteries or failure, it will automatically retract the awning after about half an hour to both protect the awning and to alert the owner that the motion sensor is not working. Once the pulse is restored (usually by installing new batteries) normal operation will resume.

Although this item will control a Universal motor, the Universal motor does not have the extra protective functions mentioned above if the item stops sending the pulse. The motion sensor is a more reliable method of protection than the Sun/Wind sensors as it responds to actual physical movement of the front bar and not the wind speed detected by a device mounted nearby.

This unit has 9 pre-determined sensitivity settings.

Cannot be used in conjunction with Sun/Wind Sensors.

# RS005W (white) RS005B (black)

Frequency (MHz)	433.92
Codes	Rolling
Protection Index	IP44
Power	2x AAA Batteries

# RS001 Solar wind & sun sensor

The RS001 cannot be used in conjunction with Motion Sensors

### Specifications

Frequency (MHz)	433.92
Codes	Rolling
Protection Index	IP44
Display	LED
Power	Solar Panel & Rechargeable Battery

- Programmable with 5 wind speed and 9 light intensity settings
- Usable as sun and wind sensor where wind overrides sun
- Sun sensor can be disabled if required
- For use with WSER Series motors

# RS102 Internal sun sensor

Frequency (MHz)	433.92
Codes	Rolling
Protection Index	IP44
Display	LED
Power	3V Lithium
	Battery (CR2032)

- 3 fixed and 1 user setting.
- Includes timer functions that allow 8 up and down timed operations.

# The Alpha Drapery System arriving in 2023

### Molex Cables, Limit Setting Device & Test Lead

### **Molex** Cables

Alternatively you can use it as a temporary means of powering up 3 core remote control motors while you set limits. Switch is locking so it does not need to be held down.

### **Retractable Awning Motor Guide**

48

Currently Alpha's Retractable Awning Motor offerings are a 50Nm and 100Nm motor.

The RED 100Nm listings in the 70mm tube section below indicates that this motor is incompatible with a 70mm tube, due to its physical size.

#### **70MM TUBE**

NUMBER OF ARMS	2 ARMS	3 ARMS	4 ARMS
UP TO 5ft PROJECTION	30Nm	30Nm	50Nm
UP TO 6.5ft PROJECTION	30Nm	50Nm	50Nm
